Week 11 Discussion

Nov 2, 2019 at 8:16am

When pasture breeding, the correct bull to cow or ram to ewe ratio is important. Too many bulls or rams are a waste of money and too little can impact reproductive efficiencies. This is called "**Mating Capacity**".

1. **Please research and recommend the correct ratio of males to females for cattle and sheep? Please reference your numbers.**
2. **What are some factors that might influence the bull:cow or ram:ewe ratio?**

Full credit will be awarded to a fully justified (referenced) primary post and a reply to a peers' post by the deadline.
