## Lighting 101—Lighting Plan

*Example of a lighting plan:*

1. Create a lighting plan for the plan on the next page.
2. Use a variety of general, task, and accent lighting on your plan. This lighting can structural and portable.
3. Include a written description of the type of lighting you want to use throughout the space. *(for example: A ceiling fan above the seating area and chandelier above the dining will provide general lighting. Lamps on the side tables will provide portable accent lighting.....)*
