Degrees

Master of Public Health (MPH) (Plan A, B or C)

This program is targeted to students who are interested in seeking out leadership positions in the field of public health. The MPH degree is also frequently used as a stepping stone to medical, dental school, or other graduate programs when combined with a nutrition degree or other undergraduate science degree. Many of the required courses can be taken online to accommodate students who may already be in the workplace.

Learning Objectives

Students will demonstrate knowledge of biostatistics, epidemiology, environmental health, sociobehavioral public health, and public health policy and administration.

Students will demonstrate competency attainment through applied practice experiences in governmental, non-governmental, non-profit, industrial and for-profit settings or appropriate university-affiliated settings.

As a result of successfully completing the requirements of the MPH degree, students will be prepared for leadership positions within local, state, and federal health agencies, the private industry, and non-profit organizations.

Outcomes Data (Based on 2016 CEPH Accreditation Standards)

- 70% of students will complete the degree in 2 years or less after beginning MPH coursework.
- 80% of graduates will be employed or enrolled in future education within 1 year of program completion.
- 80% of graduates will report being 'confident' in their ability to apply competencies in their post-graduation placements.

Data Based Decisions

Will be available starting in the spring of 2019
